

DIRECTOR OPERATIONS REFERENCE

Parent Portal Invitations, Setup & Device Installation

A step-by-step playbook for sending access, helping families install the portal, resolving common issues, and knowing when to stop.

THE BEE SUITE • PARENT ACCESS

Invite, sign in, then install

Use the verified guardian email, school-issued first-login password, and secure BEE Suite address.

- 1 Confirm guardian**
Verify email, phone, family link, children, and pickup access.
- 2 Send invitation**
Use the approved invite with the secure URL, email, and first-login password.
- 3 Open secure site**
Use thebeesuite.io/parents. Stop if Safari says Not Secure.
- 4 Sign in**
Enter the guardian email and issued password.
- 5 Install**
Use Add to Home Screen on iPhone or Install app on Android or Fire.
- 6 Check family**
Confirm the correct school and children before continuing.

STOP / VERIFY
Never forward credentials or request passwords, bank logins, or full card numbers by message.

CURRENT ACCESS CHANNEL

Parents use the secure BEE Suite web portal at <https://thebeesuite.io/parents>. Treat browser installation as the current app-like option. Do not direct families to an app store unless leadership issues a separate launch notice.

How To Use This Guide

Use the numbered workflow for normal invitations. Jump to the troubleshooting matrix when something fails. Use the escalation packet whenever the issue involves wrong-family visibility, custody, payments, or a provider error.

Need	Go to	Director outcome
First invitation	Sections 1-3	Verified guardian receives the correct setup email.
Parent setup help	Section 4	Parent confirms identity, children, school, and kiosk PIN.
Install by device	Section 5	Parent gets app-like access from the secure portal.
Invite/login failure	Sections 6-7	Director applies a safe workaround or escalates.
Access change	Section 8	Outdated access is handled without deleting history.
Support ticket	Section 10	Support receives enough evidence to act safely.

THREE SEPARATE GATES

Parent portal invitations, kiosk/PIN activation, and billing/payments are separate decisions. A successful invitation does not authorize kiosk use or online payments.

1. Rules Directors Should Remember

- **Verify before sending.** The guardian record, personal email, phone, family link, children, school, and access status must be correct.
- **Invite one adult at a time.** Each guardian should use their own personal email and their own login.
- **Provider accepted is not the same as delivered.** The screen confirms the email provider accepted the message; it does not prove the message reached the inbox.
- **A resend preserves an existing password.** Do not tell a returning parent to use the first-login password if they already changed it.
- **Never ask a parent to send a password, kiosk PIN, bank login, or full card number by email, text, or chat.**
- **Stop on wrong-family visibility.** Treat any unrelated child, family, custody, medical, incident, document, photo, or billing record as an urgent privacy issue.

2. Before You Send An Invitation

Complete this check in the family profile. Do not rely on a spreadsheet, an old email, or another family's record.

1. Confirm your director account is showing the correct school.
2. Open Family Profiles and select the intended family.
3. Read the current-family header and confirm the school, family, selected child, and selected guardian.
4. Confirm the guardian's full name and relationship.
5. Confirm the guardian has a valid personal email. The invite button is unavailable without one.
6. Confirm the guardian phone contains at least four digits. The system needs this to prepare the initial kiosk PIN when no PIN exists.
7. Confirm every child shown belongs to this family and school.
8. Review custody, pickup, emergency-contact, and access restrictions before granting portal access.
9. Resolve any listed import/readiness blockers. Do not work around a blocked invitation by creating a duplicate guardian.
10. Confirm this school and family are approved for parent portal invitations. Billing and kiosk approval remain separate.

STOP AND ESCALATE

Do not invite when identity, custody, family ownership, school scope, or child linkage is uncertain. Correct the source record first.

3. Send Or Resend The Parent App Invite

First invitation

1. Open Family Profiles.
2. Select the correct family and guardian.
3. Scroll to Parent Portal Access.
4. Review the guardian name, family name, email, and Linked/Not linked badge.
5. Select Send Parent App Invite.
6. Wait for either Portal access ready or Needs attention. Do not click repeatedly while the request is working.
7. If successful, tell the parent which email address received the invitation and ask them to follow the steps in order.
8. If Copy Invitation for Manual Email appears, keep it as the approved delivery fallback.

What the successful action does

- Creates or links a parent-guardian portal account for the verified email.

- Uses the school-issued first-login password only when a new credential is created.
- Preserves a returning parent's current password.
- Links eligible guardian records using that verified email within the authorized organization.
- Prepares the initial four-digit kiosk PIN from the last four phone digits when no PIN exists.
- Sends the parent setup email and creates a manual-copy version.
- Records an audit event for the invitation attempt.

Resend or recover delivery

1. Reopen the exact family and guardian record.
2. Confirm the email is still correct.
3. Select Resend Parent App Invite.
4. Tell the parent to use their current password. If they do not know it, use Forgot password on the parent sign-in page.
5. Check spam, junk, promotions, and filtered mail.
6. If automatic delivery is uncertain, select Copy Invitation for Manual Email and send it from the school's approved email account to the exact guardian email displayed.
7. Do not change the login email or create another guardian merely to make the message send.

WHAT LINKED MEANS

Linked means the guardian record is connected to a parent user. It does not prove the invitation was delivered, opened, or completed.

4. What The Parent Completes

THE BEE SUITE • PARENT SOP

iPhone first • iPad • desktop

Your family portal, led by iPhone

Use iPhone for everyday updates and payments; iPad and desktop show the same family portal.

- 1 Verify family**
 Confirm the school, child, and selected day.
- 2 Review the day**
 Open reports, activities, photos, care details, and notes.
- 3 Check Billing**
 Review the invoice, amount, payment status, and ledger.
- 4 Protect access**
 Use only your login; contact the school if a record is wrong.

1. Open the invitation and confirm the address begins with <https://thebeesuite.io>.
2. Open the parent setup page at <https://thebeesuite.io/parents/setup>.
3. Sign in with the guardian email. A new account uses the first-login password shown in the invitation; a returning account uses its current password.
4. Confirm the parent name, phone, relationship, email, school, and children.
5. Stop and contact the school before continuing if any identity, school, or child information is wrong.
6. Confirm or change the four-digit kiosk PIN. The initial PIN is based on the last four phone digits when the school has not already set one.
7. Select Finish setup and open portal.
8. Confirm only the correct family and children appear.
9. Install the portal on the device if the parent wants app-like access.
10. Complete billing or payment setup only when the school separately confirms those tools are enabled.

Password rules directors should explain

- **New parent:** use the first-login password in the invitation.
- **Returning parent:** use the current password; resend does not overwrite it.

- **Forgotten password:** select Forgot password on the parent sign-in page.
- **Optional change:** the parent can change the password from Parent Portal settings; the new password must be at least eight characters.
- **Director boundary:** never request, collect, store, or test the parent's private password.

5. Install The Parent Portal By Device

Install from <https://thebeesuite.io/parents> on each device. Installation creates app-like access; the same guardian account is used on every device. Menus may vary slightly by browser version.

iPhone or iPad - Safari

1. Open Safari and go to <https://thebeesuite.io/parents>.
2. Confirm Safari shows thebeesuite.io with a secure connection and does not say Not Secure.
3. Tap More or Share.
4. Choose Add to Home Screen. If it is missing, scroll to Edit Actions and add Add to Home Screen.
5. Turn on Open as Web App when Safari shows that option.
6. Tap Add, then open the BEE Suite icon from the Home Screen.
7. If the BEE Suite launcher opens, choose Parent Portal.

Use Safari in a normal tab, not a private tab. The parent can still use the secure browser page without installing.

Android phone or tablet - Chrome

1. Open Chrome and go to <https://thebeesuite.io/parents>.
2. Tap the three-dot menu beside the address bar.
3. Choose Install and create shortcut, Install, Install app, or Add to Home screen.
4. Follow the on-screen confirmation.
5. Open the new BEE Suite icon and choose Parent Portal if the launcher appears.

Update Chrome, use a normal tab, and reopen the secure parent URL. The portal still works in Chrome if installation is unavailable.

Amazon Fire tablet - Silk

1. Open Silk and go to <https://thebeesuite.io/parents>.
2. Open the browser menu.
3. Choose Add to Home screen or Install app when available.
4. Confirm the BEE Suite name and open it from the tablet Home Screen.

Silk does not always offer an install prompt. Bookmark the secure parent URL and use it in Silk when the menu has no install option.

Windows computer - Chrome or Edge

1. Open Chrome or Edge and go to <https://thebeesuite.io/parents>.
2. In Chrome, use the install icon or More > Cast, save, and share > Install page as app.
3. In Edge, use the install icon or Settings and more > Apps > Install this site as an app.
4. Confirm the installation and pin it to Start or the taskbar if desired.
5. Open BEE Suite and choose Parent Portal if the launcher appears.

Mac computer or Chromebook - Chrome

1. Open Chrome and go to <https://thebeesuite.io/parents>.
2. Use the install icon or More > Cast, save, and share > Install page as app.
3. Follow the on-screen confirmation.
4. Open the BEE Suite app from Applications, the Dock, or the Chromebook launcher.
5. Choose Parent Portal if the BEE Suite launcher appears.

A bookmark is an acceptable fallback when the browser or a managed device blocks installation.

SHARED-DEVICE RULE

A personal parent portal should not remain signed in on a shared classroom, lobby, work, or borrowed device. Sign out after use and do not let the browser save the password.

6. Fast Troubleshooting Decision Tree

Question	If yes	If no / next action
Is the invite button active?	Continue with the verified guardian.	Add or correct the guardian's personal email.
Did the action show Portal access ready?	Provider accepted the setup email.	Read the exact Needs attention message and correct only the named blocker.
Did the parent receive it?	Have the parent complete setup.	Check junk/filtering, verify email, resend once, then use the manual copy.
Is this a returning parent?	Use current password or Forgot password.	Use the first-login password shown in the new-account invite.
Can the parent sign in?	Confirm family, children, and school.	Verify exact email, then use Forgot password; do not test the password for them.

Question	If yes	If no / next action
Are the correct family and children visible?	Continue to PIN/install.	Stop immediately; correct the guardian-family link or escalate as privacy risk.
Does the browser offer Install?	Complete the device steps.	Verify secure URL/browser; use a bookmark as fallback.
Is billing visible?	Use only if separately approved.	Do not treat missing billing as an invitation failure; verify the billing gate.

7. Common Problems And Safe Responses

What the director sees/hears	Likely cause	Safe director response
Send button is disabled	No guardian email	Correct the guardian profile; do not use another adult's email.
Add a phone number with at least 4 digits	No usable phone/PIN seed	Correct the guardian phone, then retry.
Invitation blocked until records are corrected	Import, identity, or family-link blocker	Fix the exact source data listed. Do not override or duplicate the guardian.
Provider accepted; parent has no email	Delivery filtering or delay	Verify email, check junk, resend once, then send the generated manual copy from approved school email.
Linked badge, but parent never set up	Account link exists; setup incomplete	Resend. Existing password remains; use Forgot password if needed.
First-login password does not work	Existing account or provider rejection	Try current password or Forgot password. Escalate the exact error; do not change provider security settings.
Parent sees no children	Guardian-family link incomplete	Stop setup and correct the link before further portal use.
Parent sees the wrong child/family	Authorization or scope defect	Tell the parent to sign out. Capture minimal evidence and escalate urgently as a privacy issue.
Install option missing	Wrong browser, insecure URL, private mode, managed device, or browser limitation	Use the recommended browser, secure URL, and normal tab; bookmark as fallback.
Installed icon opens launcher	One BEE Suite web app serves several roles	Choose Parent Portal. If desired, bookmark the parent URL.
Payment button missing	Billing not separately enabled or no payable invoice	Review billing readiness; do not resend the portal invite.
Payment error	Stripe/invoice issue, not installation	Capture invoice, amount, method, time, and error; do not ask for bank or full-card details.

8. Access Changes And Special Cases

Guardian email changes

- Verify the requested change using the school's approved identity process.
- Update the guardian profile first.
- Do not create a second guardian or send an invite to an unverified replacement email.
- If the old login remains linked or the new email conflicts with another account, stop and escalate for an account-link review.

Guardian no longer has access

- Follow the school's custody, authorization, and record-retention procedure.
- Disable parent portal access through the approved workflow.
- Do not delete family, billing, attendance, incident, or audit history to remove login access.
- Confirm whether the same adult is linked to any other authorized family before full account deactivation.

More than one guardian

- Invite each authorized adult using their own personal email.
- Do not ask spouses, relatives, or pickups to share a password.
- If adults intentionally share one email, explain that the account is not individually attributable and follow the school's approved policy before inviting.
- Never give one guardian another guardian's credentials or kiosk PIN.

New phone, reinstall, or multiple devices

- The parent does not need a new account; install the portal again and use the same email and current password.
- If the password is forgotten, use Forgot password.
- Signing out or removing the icon does not delete school records.
- Each device must be installed separately.

9. Security And Privacy Boundaries

Directors may	Directors must not
Verify guardian identity and profile data.	Collect or test a parent's private password.
Send/resend the approved invitation.	Forward credentials to a different email or guardian.
Use the generated manual email copy.	Rewrite the invite with bank, card, or password requests.
Help the parent navigate secure browser menus.	Install on a shared device and leave the parent signed in.
Capture the smallest useful screenshot.	Expose unrelated child, medical, custody, or billing data.
Escalate a provider or scope error.	Change Supabase, email-provider, Stripe, or production settings.

OFFICIAL ADDRESS

Use only <https://thebeesuite.io>. If the browser says Not Secure or shows another domain, stop, close the page, and reopen the official address.

10. Escalation Packet

Capture these details before contacting BEE Suite support. Omit passwords, PINs, bank credentials, and full card numbers.

- School/location name and location ID, if available.
- Director email and role.
- Guardian name and exact login email.
- Family and child names needed to identify the record.
- Page URL and button selected.
- Exact error text.
- Date, time, and timezone.
- Whether the screen said Portal access ready.
- Whether this was Send or Resend.
- Whether the manual-copy option appeared.
- Device type, operating system, and browser.
- A minimally revealing screenshot when safe.
- Whether the issue affects one family or multiple families.

Escalate urgently when

- A parent sees another family, child, document, incident, photo, custody note, medical item, balance, invoice, or payment.
- Multiple families cannot log in.
- The provider rejects every parent invitation.
- A live payment or payout behaves incorrectly.
- A custody or authorized-pickup conflict is discovered.

11. Ready-To-Use Director Script

INVITATION SENT

I sent your BEE Suite parent portal invitation to [guardian email]. Open the secure link in that email. If this is your first login, use the first-login password shown there. If you already have an account, use your current password or select Forgot password. Before continuing, confirm that your school and children are correct.

INSTALL HELP

On iPhone or iPad, open the parent portal in Safari and use Share > Add to Home Screen. On Android, open it in Chrome and use the menu > Install or Add to Home screen. If the BEE Suite launcher opens, choose Parent Portal.

SAFETY REMINDER

The school will never ask you to send your password, kiosk PIN, bank login, or full card number by email or text. If you see the wrong child or family, sign out and contact us immediately.

12. Close-The-Loop Checklist

- Invitation was sent to the verified guardian email.
- Director knows whether this was a new account or a resend.
- Parent can reach <https://thebeesuite.io/parents>.
- Parent can sign in or has used Forgot password.
- Parent confirmed the correct school and children.
- Parent confirmed or changed the kiosk PIN only if kiosk use is approved.
- Portal was installed or bookmarked on the chosen device.

- Parent knows billing may remain unavailable until separately enabled.
- Any unresolved issue has an owner, evidence, and next action.

Reference Notes

Product behavior was reviewed against the current BEE Suite parent invitation, login, setup, password, and install-prompt code on July 30, 2026. Device menu wording can change with browser updates.
