

Billing Admin SOP - The BEE Suite

Last updated: October 7, 2026

Audience: billing admins, school directors handling billing, accounting users, and launch support.

Purpose

CURRENT GUIDE Confirm the correct school and an approved feature before following these steps.

This SOP explains how billing users manage tuition, invoices, payment methods, ACH setup, card payments, dunning, reconciliation, and payment support in The BEE Suite.

Visual Overview

Figure: Weekly tuition assignment and Thursday billing flow

Figure: Parent payment choices

Figure: School-scoped Stripe Terminal payment

Current Billing UI And Rules

Use the role-specific director/billing entry point at <https://thebeesuite.io/directors>. Open Billing & Payments -> Billing & invoices; use the Payments tab for transactions and reconciliation.

- The selected child's recurring tuition assignment is the canonical future rate. The family header and family profile show the active per-child breakdown and family weekly total.
- Weekly and four-week tuition cadences are supported where configured. Cadence changes anchor after already-billed coverage; verify the next service period before saving.
- An explicit \$0.00 child assignment records a verified fully agency-funded rate and does not create a family tuition invoice.
- Weekly tuition credits are itemized by child and service period. Apply and verify credits before deciding the remaining amount to collect.
- A single late fee or vacation credit belongs under One-time fee / credit; it changes the family balance once and does not change recurring tuition or repeat on future weekly invoices.
- Withdrawn and historical families do not appear in active receivables totals; use past-record review when historical balances need investigation.
- Create Invoice Now creates a due-now invoice and does not charge a payment method.
- Use the approved Void invoice action only for an eligible invoice with no succeeded payment. A voided invoice cannot open a new checkout. Preserve the invoice, payment, and ledger audit history.
- The school absorbs Stripe processing costs. No processing fee is added to the parent's payment total. The platform fee and processor costs are school-side accounting items and must not be represented as a parent surcharge.
- A secure saved method does not enable autopay. Autopay remains a separate, explicit family authorization.

Wait for the saved success state or processor result before repeating an action. Full dashboard pages no longer auto-refresh in the background; reopen the specific billing record when a fresh verification is required.

Billing Admin Responsibilities

- Keep family billing accounts and ledger balances accurate.
- Confirm tuition plans, fees, discounts, subsidy/copay rules, and due dates before invoicing.
- Send secure payment setup links instead of collecting card or bank details manually.

- Present card and bank choices accurately. Card is first in the current parent flow; bank options remain available when enabled.
- Confirm parent checkout shows the invoice, payment method, and exact total. The school absorbs Stripe processing costs; no processing fee is added to the parent payment.
- Reconcile payments after processor confirmation.
- Escalate refunds, disputes, failed payments, duplicate charges, and policy questions.

Before Live Parent Payments

Do not send live payment links until all items are complete:

1. The school has completed Stripe connected payout onboarding.
2. Stripe status says charges and payouts are ready for the school.
3. Webhook reconciliation is configured.
4. Tuition plans and open balances are reviewed against school records.
5. ACH, instant-bank, card, autopay, refund, dispute, and failed-payment policies are approved.
6. Parent-facing payment disclosures are approved.
7. Confirm the school-absorbed processor-cost policy is active and no parent processing surcharge is configured.
8. A billing smoke test passes for the school.

Daily Billing Review

1. Log in and confirm the school scope is correct.
2. Open Billing & Invoices.
3. Review open invoices, past-due balances, failed payments, pending bank payments, subsidy items, and upcoming tuition runs.
4. Filter to the correct school before changing any record.
5. Open the family billing account before creating, charging, or adjusting anything.
6. Document unresolved billing issues for the director or accounting owner.

The Three Separate Billing Controls

Do not treat these as one switch:

1. **Weekly invoice creation** is the child tuition assignment. On Thursday, an eligible positive weekly assignment creates the invoice for the following week. It does not charge Stripe and does not enable autopay.
2. **Family autopay** is a separate, explicit family-level choice. It uses the one selected saved method to collect eligible open invoices on or after their due date. Saving or replacing a method does not enable autopay.
3. **Batch invoice creation** is a manual way to create many invoices. It does not directly charge Stripe. A due batch invoice can still be picked up later by autopay, so never batch a tuition period already covered by recurring assignments.

Create Invoice Now also creates one due-now invoice; it is not an immediate card or bank charge. Charge Selected Method is a deliberate one-time stored-method charge and can be used while autopay is disabled.

Set A Family's Weekly Tuition Correctly

Complete these steps once for each child:

1. Open Billing & Invoices and select the exact school, family, and child. Stop if the sticky header is wrong.

2. Review the family ledger first. Confirm there is no duplicate invoice for the same child and week.
3. Open **Weekly tuition plans**. Create or edit the school-scoped plan if needed. Use the actual weekly family amount after an approved discount; do not overwrite a shared plan to correct one family's history.
4. Open **Recurring tuition**. Choose the child and the correct school plan.
5. Confirm **Customer weekly tuition** and **Family weekly total**. Sibling rates are separate child assignments and should add up to the family total.
6. Set **Enabled** only for a positive family-paid rate. An explicit \$0.00 CCDF/voucher assignment records agency-funded tuition and creates no family invoice.
7. Set the start week to the first service week that should be invoiced. Confirm the year carefully; an accidental future year prevents invoices.
8. Save the tuition assignment. Reopen the family and confirm the child rate, start week, and family total.
9. Do not use **Create Invoice Now** just because you edited a historical invoice. Historical invoice corrections do not change the future child rate.
10. If one exact week is genuinely missing, use **Create Invoice Now** only after checking that recurring or batch billing has not already created it.

The amount saved on the child assignment is the canonical future weekly rate. If the plan price later changes, review existing child assignments; do not assume historical assignment snapshots changed automatically.

Opening Balance: Use Once Or Leave Zero

The opening balance is a cutover tool, not a tuition-rate field.

- Enter a positive opening balance only when creating a new family and the family already owes a verified amount from before The BEE Suite cutover date.
- Leave it blank or 0 for a new family with no prior debt, normal weekly tuition setup, new invoices, or an existing family.
- Leave it 0 if historical open invoices will be entered or imported separately; otherwise the same debt is counted twice.
- Never enter the weekly tuition rate as an opening balance.
- Never use a negative opening balance. Record a verified credit, agency payment, refund, or adjustment through the family ledger with its source and approval.
- Stop and reconcile the ledger if you are unsure whether the amount is debt, a payment, or a credit.

The intake form blocks negative opening balances and blocks adding another opening balance to a matched existing family.

Invoice A Pending Or Waitlisted Family

Use this flow for an approved enrollment, registration, or deposit fee before care begins. A pending family appears in the family selector with **Pending / waitlisted**; changing enrollment status is not required.

1. Open **Billing & Invoices**, select the exact school, and choose the prospective family.
2. Confirm the pending/waitlisted banner and the correct family and child names.
3. Select **Prepare Enrollment Fee**.
4. Use **Custom charge** for an entered approved amount, or **Product / fee** when the school already has the exact fee configured.
5. Enter the approved amount, due date, billing period, and description, then create the invoice.
6. Reopen the ledger and verify the invoice appears exactly once. If payment instructions are needed, use the separate secure parent payment flow.

Do not use a tuition plan for a prospective family. This action does not make the child current, assign a classroom, start recurring tuition, enable autopay, or charge a payment method. If the family already has a current sibling, select the pending child under Family charge; the pending child still cannot receive recurring tuition.

Create Or Review A Family Invoice

1. Open Billing & Invoices.
2. Choose the correct center and family.
3. Confirm the family, guardians, children, and billing account are correct.
4. Choose a charge type: tuition plan, product/fee, or custom charge.
5. Choose child or whole family.
6. Enter due date and billing period.
7. Add a clear description if needed.
8. Create the invoice.
9. Confirm the invoice appears on the family ledger and parent portal.

Post One Late Fee Or Vacation Credit

Use the common One-time fee / credit task for an approved one-family exception. Do not temporarily change the child's saved tuition plan, recurring additional charges, or recurring credits and then try to remember to change them back.

1. Open Billing & Payments -> Billing & invoices.
2. Select the exact school and family. Confirm the sticky billing context, current balance, open invoices, and recent ledger entries.
3. Select One-time fee / credit under Common billing tasks.
4. Choose:
 - Late fee to post one debit and increase the family balance.
 - Vacation credit to post one credit and lower the family balance.
 - Other credit or Other fee / debit only when the approved reason does not fit a named action.
5. Enter the approved positive amount and Applies to date. The balance changes when posted; this date identifies the service or policy date in the ledger. Do not enter a minus sign; the selected action controls whether the ledger amount is positive or negative.
6. Add the service week or policy reason in Statement note. A note is required for either Other action and is shown in the family ledger.
7. Compare Current balance, the signed one-time change, and Projected balance.
8. Select the named post action and read the confirmation aloud: exact family, amount, balance direction, and assurance that recurring tuition is unchanged.
9. Reopen the family ledger. Verify the named entry appears once, the running balance is correct, and the child's ongoing tuition rate and recurring credits remain unchanged.

This is a ledger adjustment. It does not submit a payment, enable autopay, void or edit an invoice, or repeat on future billing runs. If policy requires a separate formal invoice for the fee, use Family charge -> Custom charge instead and do not also post a debit.

Batch Tuition Run

1. Confirm tuition plans and child assignments are current.
2. Filter to the correct school. Tuition plans are school-scoped and cannot be assigned across locations.
3. Confirm recurring tuition has not already created invoices for the same period. If it has, stop.
4. Open the batch tuition tab.
5. Choose target: per matching child or per matching family.
6. Choose age group and enrollment status.
7. Confirm due date and billing period.
8. Select **Create Batch Invoices** only after reviewing scope. This does not directly charge Stripe.
9. Spot-check invoices across tuition plans, discounts, subsidy scenarios, and siblings.
10. If any family has autopay enabled, remember that a due batch invoice can be collected by the next autopay run.
11. Send parent notices only after the school approves the batch.

Recurring Tuition Assignment

1. Open the selected family.
2. Choose the child.
3. Confirm the sticky billing header shows the intended school, family, billing account, and selected child.
4. Review **Customer weekly tuition** and the **Family weekly total**.
5. Select the tuition plan assigned to that child.
6. Confirm enabled status and the start week or period.
7. Save recurring tuition.
8. Reopen the family or child profile and confirm the same rate appears there.
9. Use **Create Invoice Now** only when the school has verified that one exact invoice is missing.

The child billing assignment is the canonical weekly rate:

- Family records display the sum of active child assignments plus the per-child breakdown.
- Child profiles, enrollment records, and Billing show that same assignment.
- Do not maintain a second family-level or profile-only tuition amount.
- An eligible recurring assignment creates the Thursday invoice for the following week. The scheduler runs daily and uses Thursday for weekly assignments, including legacy assignments that previously stored Friday.
- A saved payment method is required for automatic collection, not for invoice creation.
- **Create Invoice Now** posts a due-now invoice and balance. It does not charge Stripe immediately and does not replace the recurring assignment.

Send A Secure Payment Method Request

Use this when a family needs to save ACH/bank or card details for future payments.

1. Open **Billing & Invoices**.
2. Choose the correct family.
3. Review guardian and billing email options.
4. Select the intended recipient email.

5. Send the secure payment request.
6. Tell the parent to start from the branded The BEE Suite link.
7. Explain that Save card is presented first and Connect bank account remains available for bank verification.
8. Tell the parent the exact total is shown before submission and no processing fee is added to their payment.
9. Remind the parent that The BEE Suite does not store bank login credentials, full bank account numbers, or full card numbers.
10. Explain that saving the method does not enable autopay. The family or authorized director must enable autopay separately.

Manage Family And Payer Payment Methods

- The BEE Suite billing account belongs to the family at one school. Guardians and payers are contacts; the family has one selected Stripe customer and one selected saved default method for stored-method charges and autopay.
- A secure setup link may be sent to the verified billing email or a listed guardian email. The payer completes Stripe's secure bank/card setup; staff must never collect full card or bank credentials.
- Save card, Connect bank account, or Replace saved method saves or replaces the selected family method. It does not enable autopay.
- Enable autopay requires an already saved method and explicit confirmation. Disable autopay stops automatic collection but keeps the method available for deliberate one-time payments.
- Manage payment method opens the connected-account Stripe portal. After a change, return to The BEE Suite and verify the masked method label and autopay status before billing.
- A payment method saved for one location's Stripe connected account cannot be reused at another location. Create a correctly scoped customer and method for the new school.
- If two adults want to split an invoice, do not attempt to put two methods on autopay. Keep autopay disabled or use the one agreed default; process approved one-time payments against the remaining invoice balance and verify each result before the next payment.

Bank Payment Guidance

Bank payment may have a lower processing cost for the school when it is enabled. Parents are not charged a processing fee for either method. Do not describe bank payment as the only or automatically selected method; the current parent flow presents card first.

- Connect bank account saves a verified bank payment profile for future payments or autopay.
- Pay with Link opens Stripe Link for a payment method available in the payer's Link account; it is not the bank-account setup action.
- Bank account payments may take a few business days to settle.
- Pending bank payments should not be repeated unless the school confirms the first attempt failed or expired.
- Bank payments may settle differently from cards. Tell parents the exact total and payment status are shown before and after submission.

Card Payment Guidance

1. Confirm card payments are enabled for the correct school.
2. Confirm the invoice, credits, amount, selected method, and exact total.
3. The school absorbs Stripe processing costs; do not add or describe a parent card-processing surcharge.
4. Do not manually enter or store card numbers in notes, messages, spreadsheets, or screenshots.

Run A Payment From Billing Admin

1. Choose the family billing account.
2. Choose payment target: open invoice, total balance, or custom amount.
3. Choose a payment method: autopay, a saved method, Debit or credit card, Pay with Link, or Bank account.
4. Review the payment route summary.
5. Confirm the school payout account is ready.
6. Submit the payment or open the secure checkout handoff.
7. Wait for processor confirmation or webhook reconciliation.
8. Do not mark paid manually unless the external payment has been verified.

Prevent Incorrect Or Duplicate Charges

Before every manual payment, batch, or autopay run:

1. Confirm the school, family, child, invoice number, service week, amount, and Stripe connected account.
2. Review the full ledger, including credits and payments that are pending, processing, succeeded, refunded, or disputed.
3. Use the autopay preview before a live run. Stop if the family, invoice, or amount is unexpected.
4. Keep only one selected default family method for autopay. Multiple methods attached in Stripe do not authorize charging both.
5. Never run batch billing for a period already created by recurring tuition.
6. Never click Create Invoice Now to correct a paid or already-existing invoice. Edit or adjust the specific historical record under the approved correction process.
7. Do not retry a card, ACH, instant-bank, Checkout, or Terminal attempt while it is pending or processing. First verify its status in The BEE Suite and the school's connected Stripe account.
8. If a payment succeeded but the ledger did not update, do not submit it again. Escalate with the payment ID, invoice ID, connected account, amount, and event time.
9. Account credit must be applied before deciding the remaining amount to charge. If the displayed credit or remaining balance is unclear, leave autopay disabled and escalate.
10. For refunds, identify the original connected-account charge, distinguish tuition principal from fees, and refund only the approved amount. Never compensate by deleting payment history.

Stop immediately if one invoice shows two succeeded payments, two active payment attempts, a method from another connected account, or a balance that does not reconcile. Disable autopay for that family, preserve the records, and escalate; do not issue another charge or delete ledger history.

Run An In-Person Stripe Terminal Payment

Use this only for an authorized school with a ready connected account and a certified reader assigned to that school's Stripe Terminal location.

1. Open the intended family billing account and confirm the school, family, billing account, invoice or amount, and payout account.
2. Choose In-Person Card Reader.
3. Select an online reader registered to the current school.
4. If needed, register the school's S700/S710 or WisePOS E using its pairing code and a clear reader label.
5. Confirm the parent is physically present and can review and cancel from the reader.

6. Review the account payment and exact total shown on the reader. No processing fee is added to the parent payment.
7. Ask the parent to tap, insert, or swipe on the Stripe reader.
8. Wait for processor status and webhook reconciliation before treating the payment as recorded.

Card details are encrypted by Stripe hardware and never enter The BEE Suite. Smart readers are controlled over the network; direct USB data use requires Stripe's Android mobile-reader SDK.

Failed Or Pending Payment Procedure

1. Open the family billing account.
2. Review payment status and failure reason.
3. Confirm whether another payment already succeeded.
4. If a checkout is still open or processing, do not create duplicate checkout links.
5. Use the dunning or reminder workflow when available.
6. Contact the family with approved language.
7. Escalate repeated failures, disputes, refunds, and account ownership questions.

Subsidy Or Agency Payments

Release gate: the expanded batch, ledger, dual-review, adjustment, and period-close steps below are not production-live until the two agency-ledger migrations and the exact reviewed application commit have been released and validated. Until then, follow the production public guide's baseline direct Record remittance steps. A preview deployment does not prove runtime compatibility with the unmigrated production database.

Until release, use the public guide at <https://thebeesuite.io/resources/agency-payment-reconciliation> only for the baseline direct-remittance workflow. After the migrations and application release are validated, use `docs/AGENCY_SUBSIDY_BILLING_OPERATIONS.md` and the release-aligned public guide for the complete expanded workflow.

Baseline procedure before exact-school activation:

1. Open the approved or partially paid claim for the exact school and choose Record remittance.
2. Enter the exact remittance amount, agency paid date, payment method, and unique external ACH, check, or portal reference from the evidence.
3. Review those fields and save once. After a timeout or ambiguous response, refresh before retrying.
4. Verify the claim paid amount/status and the saved remittance/reference, and confirm parent-visible family responsibility is unchanged.
5. Correct an error with Reverse remittance and a specific reason, then verify the original and compensating history. Never delete or overwrite the original entry.

Expanded procedure only after application release, database migration, and exact-school activation:

1. Open Billing & Payments -> Billing & invoices -> Agency receivables for the exact school.
2. Confirm the school-specific agency program shows Ready.
3. Match the approved claim and remittance evidence to the agency, child, authorization, service period, amount, paid date, method, and unique payment reference.
4. Prepare one deposit batch and its exact claim allocations. Use each claim only once per active batch allocation. Unsupported cash remains unapplied with an owner and follow-up date; never guess an allocation or use the family cash/check action.

5. A different billing administrator or accounting reviewer approves or rejects the batch. The preparer cannot post their own batch.
6. Refresh and verify deposit total equals allocated plus unapplied cash, the calculated and agency-ledger balances have zero variance, and family responsibility is unchanged.
7. Use reviewed adjustment or batch-reversal controls for corrections. Never delete or overwrite financial evidence.
8. Export deposits, ledger activity, and reconciliation before closing the school accounting period. CSV exports preserve formula-like external values as text. Use the history controls when an older posted, rejected, reversed, or reconciled record is not on the first page; open items remain visible on every page. Do not close beyond the current UTC accounting day. Clear every earlier pending batch, allocation, and adjustment through the period end. Close preflight never recreates claim approvals, direct remittances, adjustments, or reversals from today's editable program mappings. It may restore a missing controlled-batch event only from immutable event-time snapshots and exact source links; missing or conflicting evidence blocks close. The close audit commits atomically with the period, and family billing is unchanged. If a historical period must be reopened, reopen later closed periods first and retain the reason for each period.

Access continuity: platform owners, brand administrators, regional managers, center directors, assistant directors, and billing administrators retain the baseline claim and direct Record remittance workflow before exact-school activation. The expanded workflow requires two distinct authorized active users for that school. All-schools and read-only-auditor views remain read-only; classroom and family roles cannot mutate agency financial records. Activation does not remove unrelated billing, enrollment, classroom, parent, payment-method, or reporting access.

Stop when a bank deposit or Stripe payout cannot be tied to exact agency evidence, a batch reference is duplicated, the effective date falls within or before the latest closed period, or reconciliation has a variance. Do not write off or shift a balance to the family without separate documented approval.

Reconciliation Procedure

1. Review recent payments and ledger entries.
2. Compare processor confirmation, payment status, invoice status, and ledger balance.
3. Resolve duplicate draft checkouts before sending new links.
4. Export reports required by the school or accounting owner.
5. Escalate mismatches with the payment ID, invoice number, family, amount, and screenshot.

Weekly Billing Checklist

- Review open invoices.
- Review past-due balances.
- Review pending ACH/bank payments.
- Review failed payments and dunning tasks.
- Review subsidy/agency receivables.
- Review payment method/autopay setup status.
- Confirm upcoming tuition run settings, child assignments, and start periods.
- Spot-check that family totals equal the active per-child weekly rates.
- Export or save required reports.
- Document unresolved blockers and owners.

Billing Escalation Packet

Include:

- School name.
- Family or billing account.
- Invoice number.
- Amount.
- Payment method.
- User email.
- Stripe connected account or payment reference if available.
- Page or action attempted.
- Expected result.
- Actual result.
- Screenshot if safe to share.
- Time of issue.
